

**NAME**

Pod::Perldoc::ToMan - let Perldoc render Pod as man pages

**SYNOPSIS**

```
perldoc -o man Some::Modulename
```

**DESCRIPTION**

This is a "plug-in" class that allows Perldoc to use Pod::Man and `groff` for reading Pod pages.

The following options are supported: center, date, fixed, fixedbold, fixeditalic, fixedbolditalic, quotes, release, section

(Those options are explained in *Pod::Man*.)

For example:

```
perldoc -o man -w center:Pod Some::Modulename
```

**CAVEAT**

This module may change to use a different pod-to-nroff formatter class in the future, and this may change what options are supported.
