

NAME

CPANPLUS::Module::Checksums

SYNOPSIS

```
$file    = $modobj->checksums;  
$bool    = $mobobj->_validate_checksum;
```

DESCRIPTION

This is a class that provides functions for checking the checksum of a distribution. Should not be loaded directly, but used via the interface provided via `CPANPLUS::Module`.

METHODS**`$mod->checksums`**

Fetches the checksums file for this module object. For the options it can take, see `CPANPLUS::Module::fetch()`.

Returns the location of the checksums file on success and false on error.

The location of the checksums file is also stored as

```
$mod->status->checksums
```
