

**NAME**

Pod::Perldoc::ToPod - let Perldoc render Pod as ... Pod!

**SYNOPSIS**

```
perldoc -opod Some::Modulename
```

(That's currently the same as the following:)

```
perldoc -u Some::Modulename
```

**DESCRIPTION**

This is a "plug-in" class that allows Perldoc to display Pod source as itself! Pretty Zen, huh?

Currently this class works by just filtering out the non-Pod stuff from a given input file.

**SEE ALSO**

*Pod::Perldoc*
