

**NAME**

ExtUtils::MM\_Win95 - method to customize MakeMaker for Win9X

**SYNOPSIS**

You should not be using this module directly.

**DESCRIPTION**

This is a subclass of ExtUtils::MM\_Win32 containing changes necessary to get MakeMaker playing nice with command.com and other Win9Xisms.

**Overridden methods**

Most of these make up for limitations in the Win9x/nmake command shell. Mostly its lack of &&.

xs\_c

The && problem.

xs\_cpp

The && problem

xs\_o

The && problem.

max\_exec\_len

Win98 chokes on things like Encode if we set the max length to nmake's max of 2K. So we go for a more conservative value of 1K.

os\_flavor

Win95 and Win98 and WinME are collectively Win9x and Win32

**AUTHOR**

Code originally inside MM\_Win32. Original author unknown.
