

NAME

TAP::Parser::Scheduler - Schedule tests during parallel testing

VERSION

Version 3.26

SYNOPSIS

```
use TAP::Parser::Scheduler;
```

DESCRIPTION**METHODS****Class Methods****new**

```
my $sched = TAP::Parser::Scheduler->new;
```

Returns a new TAP::Parser::Scheduler object.

get_all

Get a list of all remaining tests.

get_job

Return the next available job or undef if none are available. Returns a TAP::Parser::Scheduler::Spinner if the scheduler still has pending jobs but none are available to run right now.

as_string

Return a human readable representation of the scheduling tree.
